

Andrii Snizhko

Front-end developer (React)

Hi! I'm a junior web developer with a focus on React. I'm seeking new opportunities and would love to explore how I can contribute to your team. Let's connect and discuss the possibilities!

Work experience

For 1 year I have been working on pet projects, which you can view by following the link to my portfolio

[Portfolio](#) ↗

Exchange Rate application

[Try demo](#) ↗

 [Github](#) ↗

This app allows you to find out the current exchange rate of hryvnia to euro and dollar, you can calculate the amount you need hryvnia in relation to the current dollar or euro exchange rate (and vice versa), you can also view the history of the hryvnia to the dollar or euro in the selected year

Technologies used: **React, React hooks, TypeScript, Next JS, MobX, Material UI, AntDesignCharts, Toaster, REST API**

Translator application

[Try demo](#) ↗

 [Github](#) ↗

In this app, in this app, you can translate your text, you can specify the current language or use the detector and language to translate, as well as the possibility to swap languages

Technologies used: **React, React hooks, TypeScript, Context, React hook form, Material UI, Toaster, REST API, Jest**

Weather application

[Try demo](#) ↗

 [Github](#) ↗

An SPA to view the weather for the selected locality or your geolocation. You can get the weather at the moment, a forecast for 14 days or for every hour on any of those days. The data is taken from a free api. The responsive design is also implemented

Technologies used: **React, React hooks, TypeScript, Redux-toolkit, Redux-Thunk, REST API, Toaster**

Skills and Techstack

JavaScript ES6+

React/React hooks

TypeScript

Next JS

Jest/React testing library

Redux/Redux-toolkit/Redux-thunk

npm/yarn

MobX

JSON

HTML5

CSS3/SASS/SCSS

AntDesign/Material UI/Bootstrap

REST API

OOP/functional programming

il8next

Classes components(lifecycle methods)

Achievements

Personalized Solutions

I've created custom hooks for various purposes such as data processing, retrieving functions or components, and dynamic theme switching. Additionally, I've made a custom cursor to improve performance and responsiveness. These customizations have helped me modularize application logic, avoid repetitive code, and create a better user experience

Education and language

Bachelor's degree

State University of Infrastructure and Technologies

React course

It-kamasutra samurai way

English

Intermediate

Ukrainian

Native
